Gannett Fleming, Inc. Relocates Engineering Office to Suffolk

Gannett Fleming, Inc., an international planning, design, and construction management firm, has announced the relocation of its Hampton Roads regional office to the Bridgeway Technology Center II Building at 7021 Harbour View Boulevard in Suffolk, VA. Gannett Fleming will be leasing 7,500 square feet for its 30 employee office in the technology office complex. Gannett Fleming will be operational in the new office by Jan. 1, 2011.

“This move is a win/win for Gannett Fleming,” said Ed Blair, vice president and regional office manager. “We’ll continue to serve our clients from a more strategic location, and employees will have the opportunity to take full advantage of all that Suffolk has to offer.”

From this location, Gannett Fleming offers civil engineering and information technology services to clients throughout Virginia and the federal government. Its staff specializes in the design and construction administration of roadway, bridge, traffic engineering, transit facility, water supply, wastewater, and stormwater projects. Information technology professionals based in the office also provide geographic information systems and complex information technology services.

“We are happy to welcome Gannett Fleming to Suffolk, and we are proud to have such an impressive company with a committed tradition of excellence choose to operate in our

City,” said Mayor Linda T. Johnson. “Gannett Fleming’s new Suffolk office will provide a strategic location within the region and give them excellent access to serve the entire Hampton Roads area.”
